**Subject:** RE: meeting

Tom,

Lots going on lately. Bill is here.

Anyway, the proposed Oxygen permit includes these as authorized activities

- (4) Discharge, injection, or emplacement of supplemental nutrient substances and/or pH adjusting chemicals, with or without the addition of an oxygen source, as determined necessary to enhance the aerobic growth environment;
- (5) Discharge, injection or emplacement of naturally occurring biologic organisms that have been cultured to preferentially degrade (by metabolism or co-metabolism) the target pollutants, as determined necessary to augment the naturally present organisms;

I think this would cover some of your products.

Don

Don

I have been trying to contact Bill to schedule the "brown bag meeting " with the group and to learn if Ken Feathers was able to include products like IEP's S-200 in the draft ORC permit. I have had no response which is very unusual. Is everything ok?

tom
